About the Walter Reed Army Institute of Research

The Walter Reed Army Institute of Research (WRAIR, pronounced "rare") consists of eleven research divisions, fourteen support divisions, two detachments in the United States and three overseas laboratories. The Institute specializes in medical research in biochemistry, immunology, experimental therapeutics, entomology, military medicine, neuropsychiatry, experimental pathology, blood products, preventive medicine, retrovirology [HIV], vaccines and their delivery systems, communicable diseases, biological and chemical threats, and combat dentistry and surgery. The staff is roughly 50% military and 50% civilian, equally divided between scientific and support personnel. Important organizational components of the WRAIR are the special field activities in Thailand, Kenya, and Germany. Research and support functions at the overseas labs are closely coordinated with efforts at the main facility near Washington, D.C.

The mission of WRAIR is to counter threats from three sources: biologically active substances, high energy and trauma, and stress and performance. The historic emphasis at WRAIR is research against naturally occurring infectious agents encountered in military training or operations. The threat of "biologically active substances" encompasses naturally occurring infectious diseases, toxins, and commonly used chemicals. In addition, there is significant research to counter physical (environmental) threats and psychological disease in training and in combat operations.

WRAIR primarily works at the applied research and pre-development level, but the Institute is also intimately involved in product development with the United States Army Medical Material Development Agency (USAMMDA), Ft. Detrick, MD. By chairing and serving on scientific steering committees, WRAIR scientists provide the technical guidance required for rational development of technical base initiatives. In addition, many products are developed and tested at the WRAIR Special Field Activity Laboratories.

WRAIR's efforts are not limited to research; WRAIR was originally founded in 1893 as the U.S. Army Medical School. It continues to be a center of learning through the military preventive medicine residency, a military medical research fellowship program, and short courses in tropical medicine, veterinary medicine and other subjects. Many of our post-doctoral fellowships bring outstanding young scientists to the Institute for up to two years at a time.

The vertical integration which marks WRAIR's structure has been present from the beginning. Just as Major Walter Reed did his outstanding work on yellow fever as a member of the first faculty, the Institute today still has the capability of identifying a threat, determining its cause, designing an answer, testing it under actual field conditions, and teaching others to use the results.

Some Major Accomplishments

- 1898: Reed-Vaughn-Shakespeare Typhoid Board established mechanism of transmission.
- 1900: Yellow Fever Board, in Cuba, proved mosquito transmission of yellow fever.
- 1918: Maj. R. L. Kahn devised what became the standard serologic test for syphilis.
- 1925: Col. Calvin H. Goodard began work which led to the science of comparative ballistics.
- 1933: Atabrine was introduced as a substitute for quinine in combating malaria.
- 1940-45: Work by Cpt. D. B. Kendrick led to the first system of blood banking, storage and use.
- 1957: Drs. Hilleman and Buescher isolated Asian flu virus strain used to make first vaccine.
- 1962: Drs. Parkman, Artenstein and Buescher isolated the Rubella virus, leading to a vaccine.
- 1979: WRAIR psychologists played a major role in developing the Army's new manning system.
- 1982: WRAIR immunologists began work to develop the world's first promising malaria vaccine.
- 1990: Maj. Robert DeFraites, Maj. Jose Sanchez, and LTC Charles Hoke conducted a major vaccine field trial with a Japanese encephalitis virus vaccine. This was the last hurdle prior to licensure of a commercial product.
- 1995: A hepatitis A vaccine is licensed. WRAIR scientists did much of the preliminary research on this vaccine strain and a pivotal field trial in Thailand

PATENTS

U.S. Patent Number 7,332,172 issued 19 February 2008, "Transformed Bacteria Producing CS6 Antigens as Vaccines," by Marcia K. Wolf, Fred J. Cassels, and Edgar Charles Boedeker

U.S. Patent Number 7,375,079 issued 20 May 2008, "Previns as Specific Inhibitors and Therapeutic Agents for Botulinum Toxin B and Tetanus Neurotoxins," by Richard K. Gordon, Deborah R. Moorad, Bhupendra P. Doctor, and Gregory E. Garcia

U.S. Patent Number 7,378,097 issued 27 May 2008, "Use of Penetration Enhancers and Barrier Disruption Agents to Enhance the Transcutaneous Immune Response," by Gregory M. Glenn and Carl R. Alving

U.S. Patent Number 7,404,961 issued 29 July 2008, "Peptides Responsive to Antibodies Against Consensus Peptide of the CS4-CFA/1 Family Proteins," by Frederick J. Cassels and Lawrence Loomis-Price

U.S. Patent Number 7,416,878 issued 26 August 2008, "Immunogenic Compositions Including Rough Phenotype Brucella Host Strains and Complementation DNA Fragments," by Mikeljon Nikolich and David Hoover

U.S. Patent Number 7,419,683 issued 2 September 2008, "Method of Inhibiting Side Effects of Pharmaceutical Compositions Containing Amphiphilic Vehicles or Drug Carrier Molecules," by Janos Szebeni and Carl R. Alving

U.S. Patent Number 7,452,721 issued 18 November 2008, "Novel and Practical Serological Assay for the Clinical Diagnosis of Leishmaniasis," by Samuel K. Martin
